IN THE CLAIMS:

Would the Office kindly enter the following amended Claim 1.

1.(currently amended) A method for the treatment of wastewater <u>sludge</u> containing human waste in a container comprising the step of applying to said sludge a biologically effective amount of composition containing a lignosulfonate and sludge digesting microbes.

- 2.(original) The method of Claim 1 wherein said lignosulfonate is ammonium lignosulfonate.
- 3.(original) The method of Claim 2 wherein said sludge digesting microbes are from the genus bacillus.
- 4.(original) The method of Claim 2 wherein said composition has a pH of between 6.5 and 7.5.
- 5.(original) The method of Claim 4 wherein said composition contains between about 80% to about 91.5% by weight of ammonium lignosulfonate, between about 8% and about 15% by weight of a pH adjusting agent, and between about .5% and about 5% by weight of a concentrated microbial product.
- 6.(original) The method of Claim 5 wherein said pH adjusting agent is lime.
- 7.(original) The method of Claim 5 further including the step of mixing said composition with water in a weight volume ratio (grams/liters) of between 2:1 and 20:1.
- 8.(original) A method for the suppression of odors in a holding tank containing human organic waste matter, the method comprising the step of adding to said organic waste material a biologically effective amount of a composition containing a lignosulfonate and organic material digesting microbes.

S.N. 10/701,785

Art Unit: 1724

9.(original) The method of Claim 8 wherein said lignosulfonate is ammonium lignosulfonate.

10.(original) The method of Claim 9 wherein said sludge digesting microbes are from the genus bacillus.

11.(original) The method of Claim 9 wherein said composition has a pH of between 6.5 and 7.5.

12.(original) The method of Claim 11 wherein said composition contains between about 80% to about 91.5% by weight of ammonium lignosulfonate, between about 8% and about 15% by weight of a pH adjusting agent, and between about .5% and about 5% by weight of a concentrated microbial product.

14.(original) The method of Claim 12 further including the step of mixing said composition with water in a weight volume ratio (grams/liters) of between 2:1 and 20:1. 15.(original) A method for the treatment of a body of water containing algae and other organic matter, comprising the step of applying to said body of water a biologically

13.(original) The method of Claim 12 wherein said pH adjusting agent is lime.

effective amount of a composition containing lignosulfonate and sludge digesting microbes.
